Hologram

By Carol a Reimer

Createspace, United States, 2014. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book. There is a growing concept within the scientific community that the World we live in is a hologram . Many scientists are seriously considering the possibility that the entire Universe was designed by a computer program, suggested in 1967 by Konrad Zuse, who built the World s first computer between 1935 and 1941. His Calculating Space discusses a lone computer computing all particle interactions. Albert Einstein described reality as an illusion. We think the World is solid when in reality, it is comprised of vibrational, electrical, chemical, electromagnetic, and digital information. A hard concept to embrace and many of us resist. Other physicists support this theory. Some have gone further and suggested the most incredible concept yet. What if we re actually more likely to be artificial intelligences trapped in a fake Universe than organic minds in the real one? Although we may think we are physical beings moving through a physical World, this too may be an illusion. We may really be receivers floating through a kaleidoscopic sea of frequency, and what we extract from this sea and transmogrify into physical...
